

Glass fittings with logic

Secura

**Thanks to their master-keying capability and non-serrated reversible flat keys, the proven Secura locks now offer even greater convenience!**

#### New: master-keying capability for Secura locks!

A new, more efficient cylinder core now offers master-keying capability with all Secura locks:

While a variety of different combinations offer individual users access to selected showcases, the person with overall responsibility is able to open all showcases with the master key.

**Now even more user-friendly locking thanks to new, non-serrated reversible flat keys!**

From now on robust, non-serrated reversible flat keys will be used as individual keys for Secura locks. These keys can be inserted into the cylinder core with particular ease and so enable user-friendly operation in the long-term.

## The advantages of Secura locks at a glance

**Secura locks offer protection against doors being lifted off the tracks or forced apart!**

Secura locks are security cylinder locks for glass sliding doors. Thanks to their intelligent design, they offer maximum security and protection against manipulation.

With conventional locks, the clearance required to insert the sash is such that it may be possible to lift the glass sliding door off the tracks. Locking cams that are too short or that can shear off provide insufficient protection against external forces.

Secura locks operate via an L-cam that engages with the adapter for the roller profile, locking the sliding sashes firmly together. They cannot be pushed apart in horizontal or lifted off the tracks in vertical manipulation attempts.

## Secura locks have a modular structure!

Secura locks consist of a security cylinder lock housing and a replaceable cylinder core.

The universal cylinder core is suitable for all Secura lock types. Thanks to a variety of combinations, it can be used not only in keyed-alike systems but also in keyed-to-differ systems.

If the lock has to be changed, the cylinder core can be easily replaced using a removal key.

Secura locks at a glance		
		Security lock with L-cam for roller profile – suitable for Supra and Robustus
		Security glass door lock with L-cam that grips around the second sash – suitable for Supra
		Security glass door lock with locking latch in lower guide – suitable for Penda/Bipenda
